2013 Air Conditioning Memo

Happy Spring! As the weather begins to heat up, we'd like to offer the following A/C information.

Window AC Weight Restriction The Board voted to ban all window air conditioners that exceed a weight of 50 lbs. The reason for the rule is because heavy air conditioners create stress on the window frames and could result in the A/C unit becoming a safety hazard (see below). The lighter units cause less stress on the windows/window frames and the reduced condensation lessens damage to the masonry façade. The Board also voted to impose a \$25.00 per day fine against units that do not comply with this rule.

Safety **Window air conditioners can pose a serious safety issue.** Residents are responsible for the proper installation of their air conditioners. An improperly installed A/C unit could create a serious safety hazard. We **strongly** recommend that you install a standalone/floor model (see below).

All window Air Conditioners cannot exceed 40 lbs. and must be installed in accordance with the manufactures instructions.

Portable Floor Model ACs Floor model or “portable” A/C units are self contained systems that do not require any permanent installation. They come with an exhaust venting tube and a window vent adapter kit. To use these units you must vent the hot air exhaust out of a nearby window.

These units are comparable in cost to window A/Cs and are energy efficient. Home Depot, for example, is currently selling a 9,000 BTU unit for \$268. LG Electronics Model # LP0910WNR

Efficiency Energy efficient A/C units that are properly rated for the size of your unit provide the most comfort. A unit that is too small will run continually without cooling the room effectively. On the other hand, if you buy a unit that's too large for the space you're cooling, it actually will be less effective than one that's the correct size. Bigger isn't necessarily better.
